SUMMARY

Business & Process Analyst who owns reporting systems, maps end-to-end workflows, and builds SQL, Python, Tableau, and Power BI analytics that turn messy data into clear decisions for executive leadership. Experienced in regression modeling, cross-validation, root-cause analysis, and ROI modeling, with a track record of presenting findings that drive engineering and process changes.

TECHNICAL SKILLS

Languages & Tools: SQL, Python (pandas, matplotlib, BeautifulSoup), R, Stata, Oracle, Jupyter Notebook, Git

Visualization & BI: Tableau, Power BI, Excel (McGraw-Hill Certified, Power Query, PivotTables)

Analytics & Modeling: Regression Modeling, Statistical Analysis, Forecasting, Cross-Validation, Text Mining, Web Scraping, Database Design (ER Diagrams, relational schema)

Process & Business: BPMN Process Mapping, Requirements Gathering, Report Specs, Root-Cause Analysis, ROI Modeling

EXPERIENCE

Business & Process Analyst | **NCS (National Credit-reporting System)** | Hammonton, NJ *Jun 2026 – Present*

- Map end-to-end workflows across core business operations using BPMN, identifying inefficiencies and driving cross-functional alignment
- Own reporting systems and dashboard infrastructure end-to-end, from requirements gathering through validation, translating business needs into technical specifications for external development teams
- Lead root-cause investigations into data quality and system performance issues, separating measurement artifacts from genuine defects so leadership decisions rest on accurate data
- Present data-driven findings directly to senior leadership, informing engineering prioritization and executive-level process changes
- Build cost-comparison, ROI, and automation-feasibility models supporting build-vs-buy decisions and executive-sponsored initiatives in product readiness and market expansion
- Partner with operations leadership to standardize data capture and reporting practices across distributed teams

Lead Data Analyst | **Cedarville University — Athletic Department** | Cedarville, OH *Jan 2026 – May 2026*

- Engineered Python pipelines (pandas, BeautifulSoup) to scrape, clean, and integrate 6 years of data across 14 sports and 98 program pages, cutting manual collection from hours to minutes
- Built and compared multiple linear regression models to predict student-athlete retention rates; applied 5-fold cross-validation on a small-N dataset (n=84), achieving a cross-validated R^2 of 0.32
- Disproved assumed links between HS recruiting metrics and winning percentage (R^2=0.02); delivered findings through Tableau dashboards that informed athletics leadership's recruiting strategy

Business Analyst Intern | **Cedar Point Amusement Park** | Sandusky, OH *Jun 2023 – Aug 2023*

- Built Power BI dashboards and SQL-driven reports used daily by operations managers to track KPIs and optimize staffing allocation
- Conducted cost-benefit analyses on ride operations and staffing models; presented findings that informed resource optimization decisions

PROJECTS

Semiconductor M&A Strategy — Market & Financial Analysis | **Cedarville University** *2026*

- Evaluated a hypothetical AMD–TCL acquisition in the $500B+ smart home market using Blue Ocean Strategy and SWOT
- Built synergy models, a financial pro forma, and 5-year revenue projections ($73.7B) to assess deal viability

EDUCATION

B.S. Finance | Minor: Business Analytics & IT Management | **Cedarville University** | Cedarville, OH *May 2026*

- Dean's List; coursework: Statistics for Business, Econometrics, Data Operations Analysis, Business Process Management
